

## **Notes of meeting 11-04**

*Week 9 meeting during the Labs*

*Location: DW PC1 cubicle 7*

*Date: 11/04/2023*

*Start time: (14:00 without the TA) 14:45*

*End time: 15:10*

*Attendees: OOPP group 33 + Mirella Gunther*

*Chair: Andrei Chiru*

*Minute taker: Razvan Dinu*

***Since this was the last meeting and it only lasted 25 minutes, the notes will be short and concise.***

The meeting started as planned, with bringing the TA up to speed about the final sprint and the multiboard.

We showed the TA the application, it is passable despite a minor bug with adding cards using long polling.

Asked about a small issue we had with Mockito, to be answered in the future.

Also showed the TA the new and improved board, and the logo.

Asked about more feedback regarding the HUE, Self-Reflection and Buddycheck. We should pass if we have passed the drafts.

After the meeting, we continued to work on the code and merged all branches of the multiboard feature.

Jan started working on implementing the changes proposed by the TA after the meeting.

Later during the day we met for a bit on Discord to merge 'multiboard' into 'main', before the closing of the repository.

***All in all, the meeting consisted of questions about the course and any last-minute unclarities regarding the state of the project or some user stories.***

***The notes were made in chronological order.***
