Notes for 18/03

Week 5 meeting between OOPP group 33 members

Location: Online
Date: 18/03/2023
Start time: 11:00
End time: 13:20
Attendees: OOPP group 33
Chair: Petra
Minute taker: Razvan for the week, Stephanie for this meeting only

- Slight misunderstanding, I (Stephanie) thought I was the minute man for this week so I started taking notes, however it should be Razvan. We decided I would continue taking the notes for this meeting and Razvan would take on the rest of week 6.

Notes (chronological):

- Updates on progress:
    - Petra: worked on list adding functionality → hardcoded for now, need to link with database in the future (will work on this on tuesday)
    - Stephanie: working on implementing websockets for quotes for now, almost done
    - Razvan: drag and drop connection to the database and dropping into the middle of the list will come later since you need to take out the indices
    - Andrei: finished tasks
    - Stephan: finished tasks

- Plan for tuesday: work on merging the quote (server) stuff with the task list (frontend) stuff
- Petra to do: naming and renaming of lists
- Jan's recent merge request has fixed opening multiple servers connection errors
- Quote classes: should stay until the end ish so that we can use them as reference but they cause checkstyle complaints,
- Multiple servers hosting multiple clients is possible on the same machine as of now, which means we have nearly finished the Multi-user requirement.
- To make sure everyone works both front end and back end, we plan on dividing each user story into an issue (to do on tuesday).

- ○ Since almost all features deal with front and back end stuff this should give everyone a chance at learning both.
- One user story per issue

- Heuristic evaluation for friday: make figma mockups and get people to test out our application
  - ○ Worked on / nearly finished mockups in figma during meeting
  - ○ To be finished by Tuesday so we can start asking for evaluation during the week.
- ASK TA about getting in touch with another team

- Split of heuristic mockups (for tuesday)
  - ○ Andrei will work on the customization scene
  - ○ Petra will finish tag customization scene

Plan of action:

- TO-DO Before next meeting (everyone)
  - ○ Get java runtime 19 working
  - ○ Get figma looking good

- TO-DO for during Tuesday's meeting:
  - ○ Meeting before meeting with TA: try to connect front end and backend
  - ○ With TA: work out issues (on gitlab) and plan out user stories
  - ○ Plan out / start outline for heuristic evaluation report

Questions for TA:
- How many people / who should we get in touch with for the heuristic evaluation?
